Paulownia solid wood kitchen cabinets

YPF kitchen cabinets are made from Paulownia Asian hardwood

Paulownia wood is light and extremely strong, it has many exceptional properties and offers numerous advantages over other wood. Paulownia wood is twice as light as oak and lighter than coniferous species timber.

A major feature of Paulownia wood is its ease of working in all aspects of carpentry with no splinters, cracking or splitting and excellent take-up of glue and finishes.

Paulownia wood strength, smoothness and the lack of blemishes makes it the preferred wood of choice for kitchen cabinets. Paulownia is water-resistant, it is exceptionally stable, withstands warping, breakages and deformations.

The shrinkage co-efficient of paulownia is very low in volume, thereby giving dried Paulownia wood a high level of dimensional stability.

Although Paulownia wood has a fine structure and a silky-smooth surface, without knots, the high ratio of strength to weight makes Paulownia wood irreplaceable in many industries and various applications.

The correlation strength-weight (main quality coefficient) in comparison with other timber species is high, and a high strength to weight ratio makes Paulownia wood suitable for some applications that require soft but relatively strong wood.

With an auto ignition temperature higher than 400 degrees Celsius, most other hardwoods are around 220 degrees Celsius, Paulownia has a flame spreading rate considerably lower to most building codes.

Paulownia is highly resistant to attacks from insects, pests and rot. Paulownia wood is unattractive to termites, it is therefore ideal to be used in areas where termites are a problem.

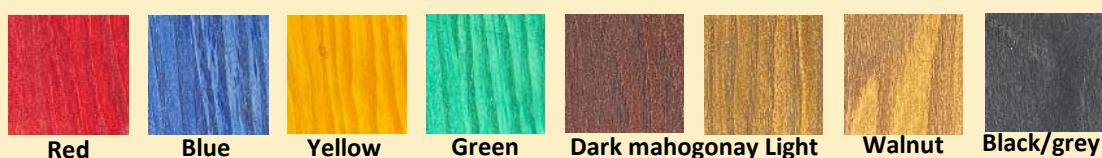

Finishing service please see page 20

YPF kitchen cabinets can be supplied from stock in natural unfinished wood, alternatively they can be supplied in any finish to order. Clear, light oak & dark oak lacquers are stock finishes.

Paulownia wood stains and paint well in all varieties of colours. The sap of paulownia is not gum or resinous based, thus the application of finishing products with various solvents and water-based paints and stains does not risk any reaction with the timber, giving Paulownia products excellent finished surfaces. With similar grain but lighter in color than oak, when stained it visually appears similar to oak and at a fraction of the price in certain applications it is be preferred to oak.

None stock stain finishes

Sustainability & the environment

- The Paulownia tree has beautiful large leaves and beautiful flowers (up to 6 cm in diameter) and a beautiful crown.
- It has up to 10 times the capacity of a regular tree to capture carbon dioxide(CO₂).
- One Paulownia tree captures 98kg of CO₂ , 1 acre of 450 trees captures 44 metric tonnes of CO₂ per year.
- It grows and matures extremely fast (7 to 8 years) and can be felled multiple times before having to be replanted.
- Paulownia timber from sustainable forests is used in a wide range of industries.
- Its high ignition temperature makes it ideally suited to be planted in areas where wildfires are a regular occurrence.
- Its leaves (foliage mass) are often used for fattening of cattle. (cows, sheep, goats, etc.)
- Extracts from the leaves are included in the composition of medicines, creams and perfumes.
- One hectare of Paulownia trees can generate up to 800 kg of honey.
- Its edible flowers are a part of some European restaurants menus.
- Strong resistance to diseases and insect pests makes it ideal for reforestation.
- Agroforestry, the Paulownia tree is suitable to plant amongst other crops such as wheat and corn.
- In the energy sector the Paulownia tree is used for biofuel, biogas bioethanol, pellets, and timber chips.

Finishing service

Finishing service & paint colours stocked (paint not doors)

All our kitchen doors, drawers fronts and end panels are supplied in natural wood, additional preparation might be required prior to finishing. After receiving delivery it is the customers responsibility to store the cabinets, doors, drawer fronts and panels properly. Unfinished items will need to be finished immediately to avoid splitting, bowing or wood movement. Failure to handle, store or finish the items properly will invalidate the warranty of the items supplied.

Our in house hand or spray paint finishing service uses a quality water based eco-friendly paint. We stock a limited number of paint colours, we offer a bespoke paint finish matched to any RAL or Farrow & Ball colour, primer is matched to the colour of the top coat specified. Primer is spray painted but customers can specify a hand paint or spray paint finish for the top coat. All painted units are flattened between coats and we do apply a minimum of 2 primer coats and 2 top coats.

For a natural look we recommend either a clear lacquer or hand paint finish. To obtain a flatter smoother finish we recommend a spray paint finish. A 100% flat finish cannot be guaranteed on solid wood, grain and minor imperfections might remain visible. Our paint or lacquer finish is a soft satin (20% sheen), we can offer a sheen % to increase or decrease the shine of the finish, we do not offer a gloss finish.

Customers can specify or supply their own paint, lacquer, stain or wax. As an alternative to a hand or spray paint finish we offers a lacquer, stain or wax finish. When a clear lacquer, stain or wax is applied, shade/grain differences remain visible between sections of the wood. Colours and shades might vary from the colour charts or online images used. Different batches of paint might have a different colour shade and therefore might not match previously painted items.

Wood is a hygroscopic material, items when finished might require remedial work once they have climatised to their new environment, any site visits to carry out remedial work to finishing, return or redelivery costs will have to be paid for by the customer.
